What is Scopus and who uses it?

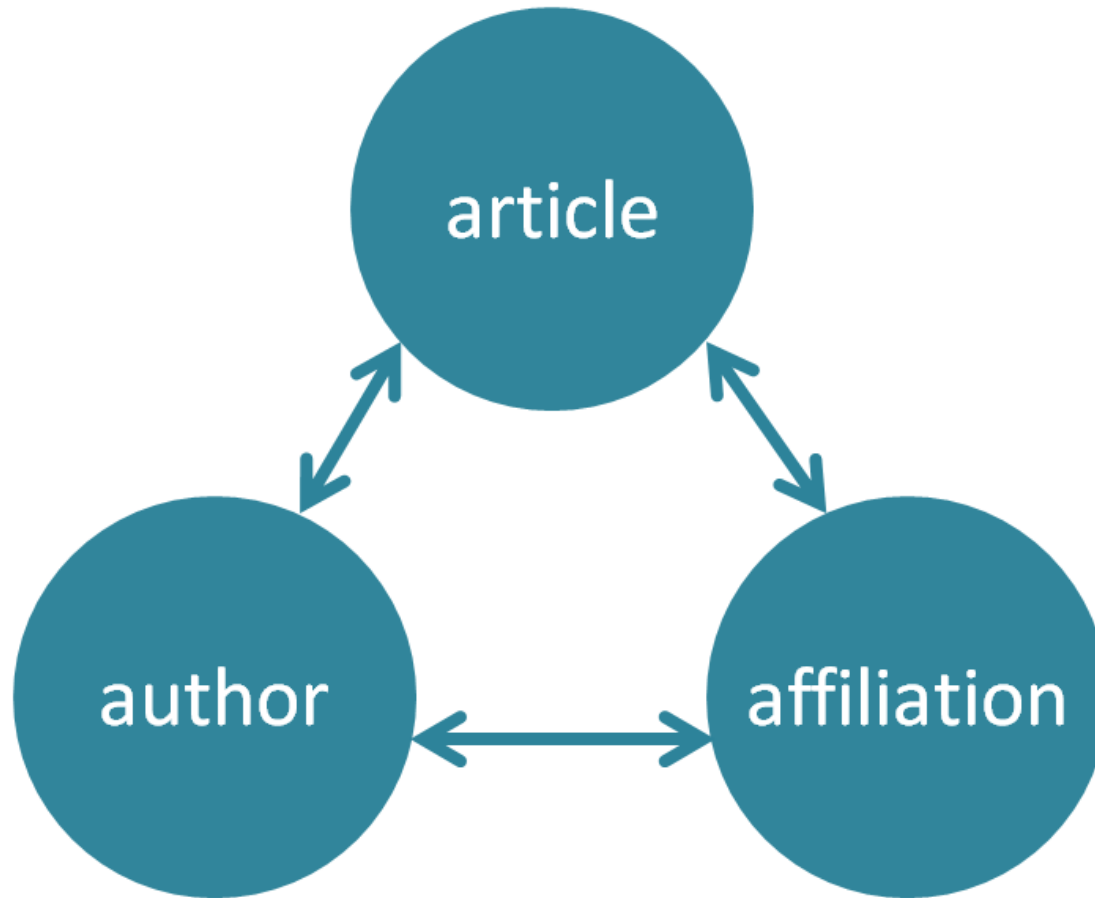

What is Scopus?

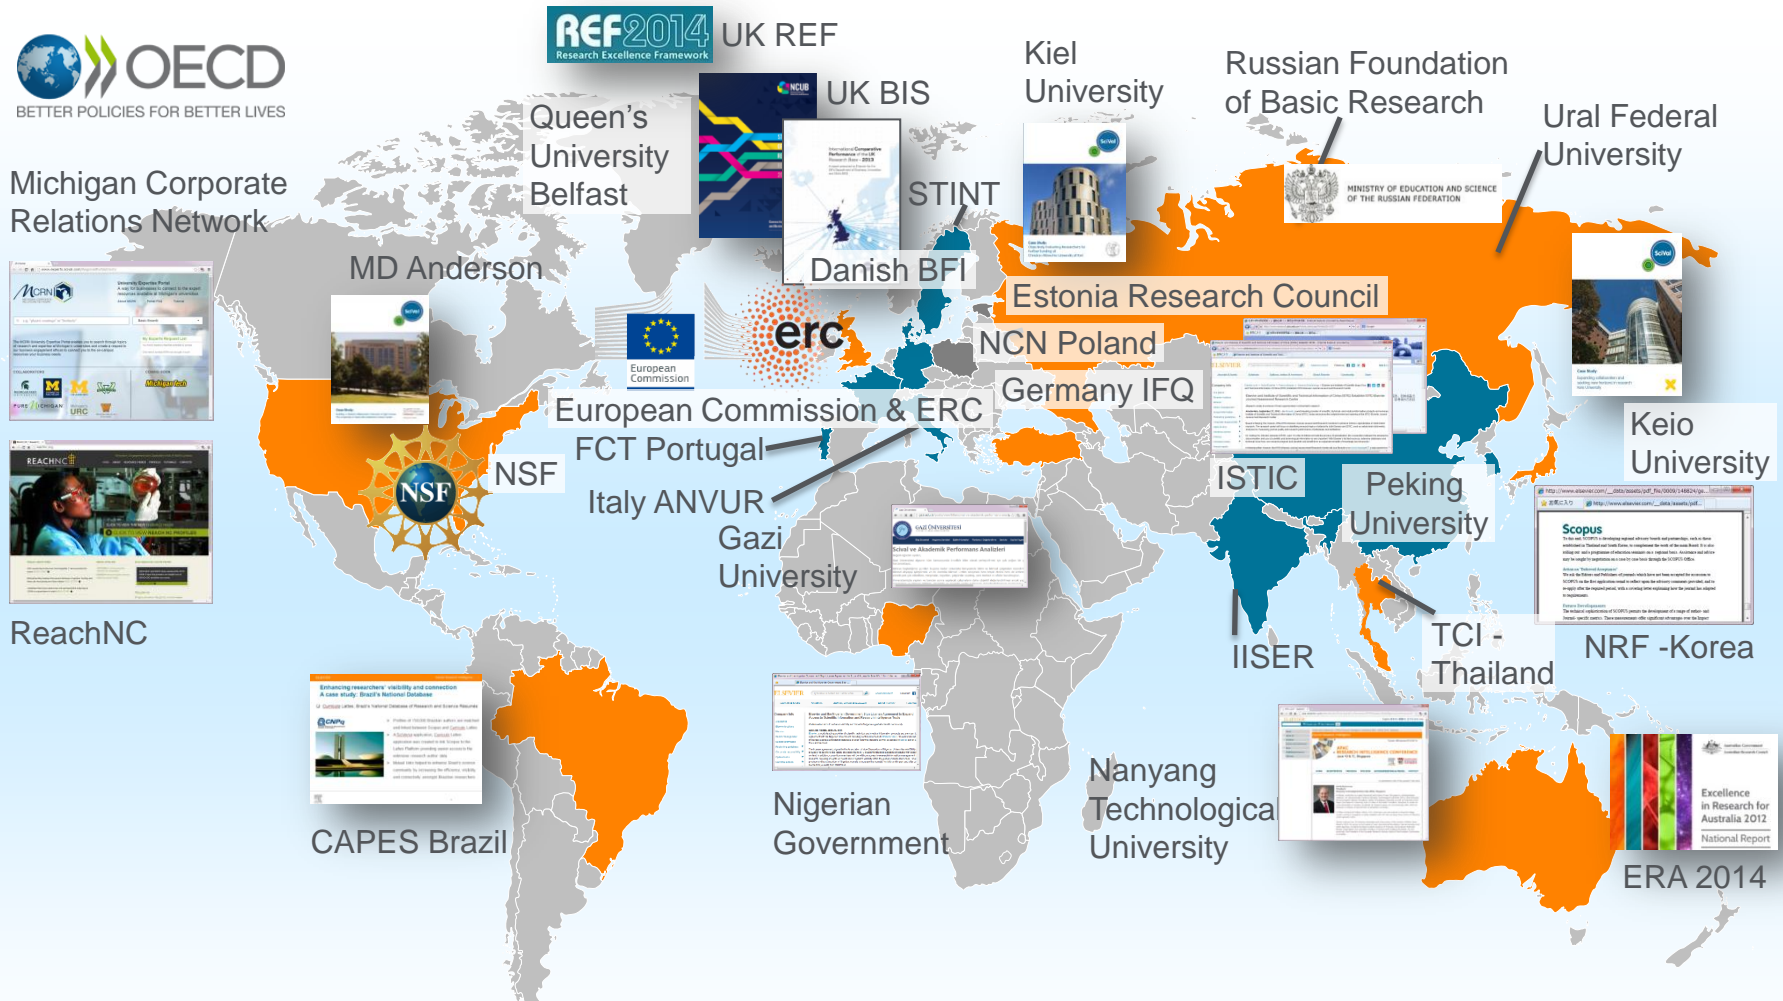

Scopus is the largest abstract and citation database of peer-reviewed literature, and features smart tools that allow you to **track, analyze and visualize** scholarly research.

The screenshot displays the Scopus website interface. At the top, the Scopus logo is on the left, and navigation links for Scopus, SciVal, Library catalogue, Register, Login, and Help are in the center. A box on the right says "Brought to you by Scopus Team". Below the navigation is a dark teal bar with buttons for Search, Alerts, Lists, and My Scopus. A purple banner below the bar reads "The Cited Reference Expansion project hits milestone: 5M records added." The main content area has a "Document search" section with tabs for Author search, Affiliation search, and Advanced search. A search bar contains the text "Search for..." with a dropdown menu set to "Article Title, Abstract, Keywords" and a search button. Below the search bar are filters for "Limit to:" including "Date Range (inclusive)" with options for "Published" (All years to Present) and "Added to Scopus in the last" (7 days), and "Subject Areas" with checkboxes for Life Sciences, Health Sciences, Physical Sciences, and Social Sciences & Humanities. On the right side, there are four promotional boxes: "Learn more about how to Improve Scopus", "Stay up-to-date on Scopus. Follow @Scopus on Twitter", "Watch tutorials and learn how to make Scopus work for you", and "Get citation alerts pushed straight to your inbox". At the bottom right, there is an "API" box with the text "Get started with Scopus APIs".

The relationships between articles, author profiles and affiliation profiles via citation data is the foundation of Scopus.com

More than 3,500 academic and government organizations and corporations, including more than 150 funding and assessment bodies, use Scopus

A closer look at Scopus data in action

Data provider of choice for a large number of ranking agencies

Sole citation data service provider for **UK's Research Excellence Framework**

Sole citation data service provider for **Excellence in Research for Australia**

Scopus data is also used in key reports

Science Europe report on European and US research collaboration and researcher mobility, 2013

Sustainability Science in a Global Context, 2015

Stem Cell Research, 2013

Scopus Content Overview

Scopus covers different source types for a reason

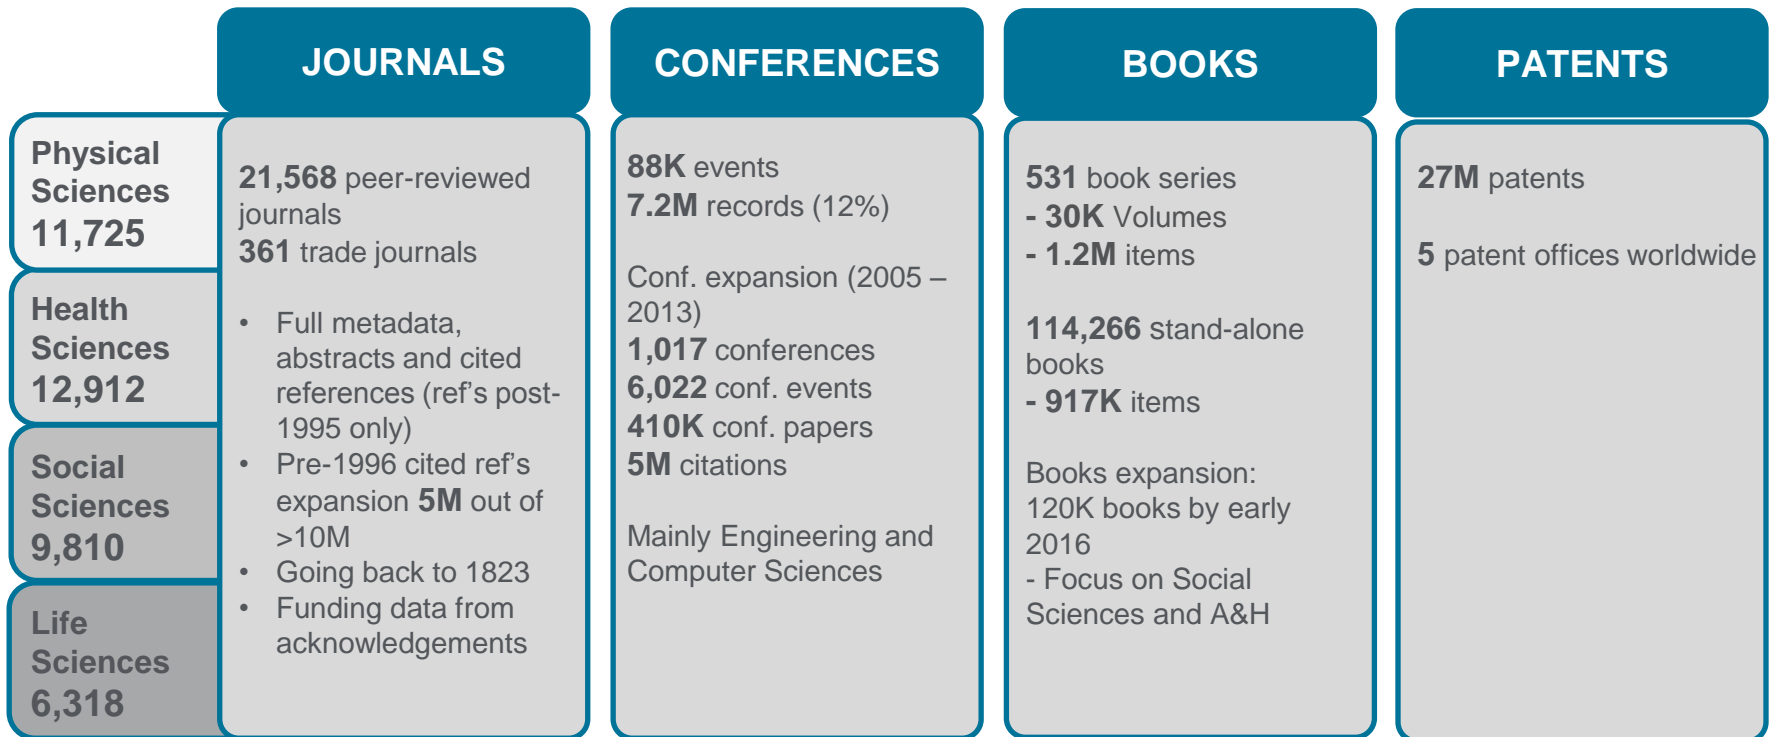

JOURNALS	CONFERENCES	BOOKS
<ul style="list-style-type: none">• Timely• Peer-reviewed (formal research)	<ul style="list-style-type: none">• Preliminary research (can be a bit less formal)• Newer ideas	<ul style="list-style-type: none">• Thorough analysis of a specific topic
All subject fields, but typical fields with high ratio of journal publication: chemical, biological, health sciences etc.	Mainly of importance in Computer Science and Engineering-related subject fields	Mainly of importance in Social Sciences and the Arts & Humanities

Different source types are added to ensure that coverage, discoverability, profiles and impact measurement for research in all subject fields is accounted for in Scopus.

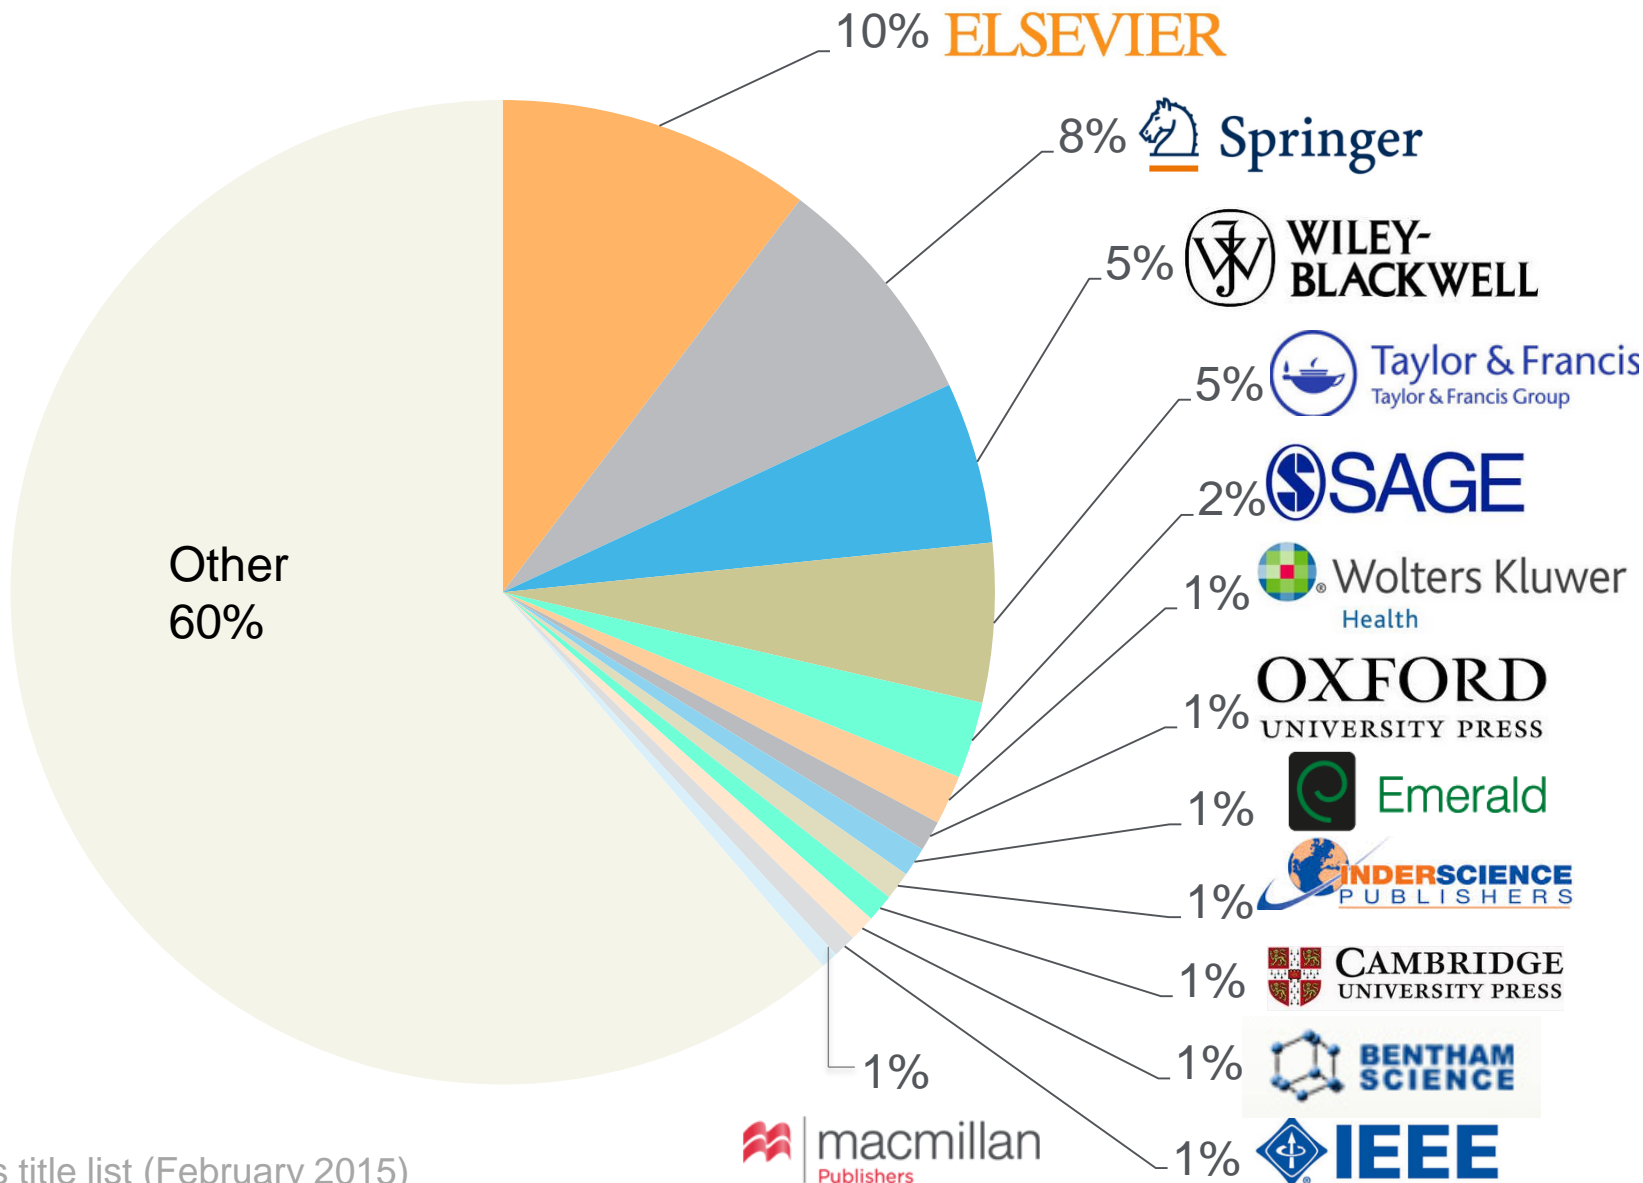

Scopus contains a variety of content to meet the needs of researchers

60.5M records from **21,568** serials, **88K** conferences and **114,266** books
 21.9M pre 1996 records | 37.2M post 1995 records

- Content from over 5,000 publishers
- “Articles in Press” from over 5,256 titles
- 4,200 Active Gold Open Access journals indexed

Ratio of titles per Publisher in Scopus

Source: Scopus title list (February 2015)

Scopus selects high quality journals via the independent Content Selection & Advisory Board (CSAB)

The CSAB is chosen for their **expertise in specific subject areas**; many have (journal) Editor and Reviewer experience.

ERA (Australia)

UNAM

MINISTRY OF EDUCATION AND SCIENCE
OF THE RUSSIAN FEDERATION

Scopus has transparent selection criteria for serial content

First, all serial titles must meet all the minimum criteria in order to be considered for Scopus review:

Peer-review

English
abstracts

Regular
publication

Roman script
references

Pub. ethics
statement

Second, all eligible serial titles are then reviewed by the Content Selection & Advisory Board according to a combination of 14 quantitative and qualitative selection criteria grouped into 5 categories (all carry equal weight):

Journal Policy

Quality of Content

Journal Standing

Regularity

Online Availability

Scopus Features Overview

Scopus helps researchers succeed with common research needs

Find out what already exists in the global world of research

i The Scopus Author Identifier assigns a unique number to groups of documents written by the same author via an algorithm that matches authorship based on a certain criteria. If a document cannot be confidently matched with an author identifier, it is grouped separately. In this case, you may see more than 1 entry for the same author.

Abstract View references (44)

We present a hierarchical **genome-assembly** process (HGAP) for high-quality de novo **microbial genome assemblies** using only a single, **long-insert** shotgun DNA library in conjunction with Single Molecule, Real-Time (**SMRT**) DNA sequencing. Our method uses the **longest** reads as seeds to recruit all other reads for construction of highly accurate preassembled reads through a directed acyclic graph-based consensus procedure, which we follow with **assembly** using off-the-shelf **long-read** assemblers. In contrast to hybrid approaches, HGAP does not require highly accurate raw reads for error correction. We demonstrate efficient **genome assembly** for several microorganisms using as few as three **SMRT** Cell zero-mode waveguide arrays of sequencing and for BACs using just one **SMRT** Cell. **Long repeat** regions can be successfully resolved with this workflow. We also describe a consensus algorithm that incorporates **SMRT sequencing** primary quality values to produce de novo **genome** sequence exceeding 99.999% accuracy. © 2013 Nature America, Inc. Journal Metrics

Scopus Journal Metrics offer the value of context with their citation measuring tools. The metrics allow for direct comparison of journals, independent of their subject classification. To learn more, visit: www.journalmetrics.com.

SJR = SCImago Journal Rank is weighted by the prestige of a journal. Subject field, quality and reputation of the journal have a direct effect on the value of a citation. SJR also normalizes for differences in citation behavior between subject fields.

IPP = Impact per Publication (IPP) measures the ratio of citations per article published in the journal.

SNIP = Source Normalized Impact per Paper measures

Registering a Personal Profile:

- Although Scopus uses IP verification, you can get the best out of it and save a lot of research time by creating your own Personal Profile.

- **Your Personal Profile allows you to:**

- Save searches for later references
- Create search alerts
- Create citation alerts to specific articles
- Save lists of selected articles
- Save your own groups of author names
- Request corrections to your Author Profile

Test your skills – Document search

1. Perform a document search on term 'cold' AND 'influenza', limit on years 2010, 2011 & 2012. How many results do you get?
2. Sort on: cited by
3. How many times has the most cited article been cited?
4. Select this article and view the citation overview. How many times has this article been cited in 2014?

Author Search

Author search

- How to distinguish between an author's articles and those of another author sharing the same name?
- How to group an author's articles together when his or her name has been recorded in different ways? (e.g. Stambrook, P and Stambrook, P.J.)
- With other databases, these problems can result in retrieving incomplete or inaccurate results.
- Scopus Author Identifier was developed to tackle this problem.

Author Profiles

- Every author with more than 1 article in Scopus has an Author Profile. This profile shows valuable information about the author, such as:
 - Variations of his names already grouped together
 - Most recent affiliation
 - Number of articles on Scopus and the citations that those articles received
 - List of co-authors
 - Author's H-Index
- The feedback button allows authors to group profiles together and ask for corrections:

Author Profiles

Scopus analyzes the data available in all publication records such as...

- Author Names
- Affiliation
- Co-authors
- Self citations
- Source title
- Subject area

...and uses this data to group all articles that belong to a specific author.

Author profile

Scopus

Enter affiliation and select subject area in order to limit the number of results

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

The H-index /Hirsch index or Hirsch number

The H-index is a metric to measure the scientific productivity and the impact of the published work of a specific scientist

In other words:

A scholar has an index of 13

if he has published at least 13 papers

each of which has been cited at least 13 times.

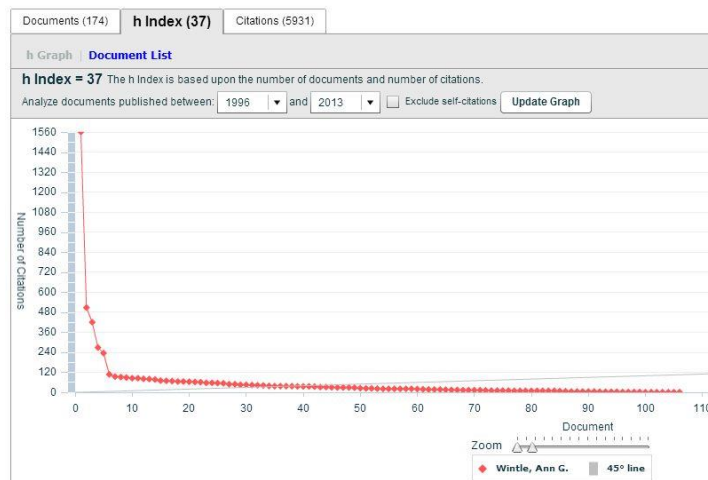

Published by Jorge E. Hirsch in August 2005

The H-index in Scopus

- Available from Author Profiles and Citation Overview pages
- H-index calculation in Scopus only considers articles published from 1996 onwards
- Besides the H-index, Scopus also has a H graph, showing articles and citations over a period of time

ORCID

ORCID

Connecting Research
and Researchers

- **Open**
- **Researcher &**
- **Contributor**
- **ID**

ORCID is an open, non-profit, community-driven effort to create and maintain a registry of unique researcher identifiers and a transparent method of linking research activities and outputs to these identifiers.

ORCID is unique in its ability to reach across disciplines, research sectors and national boundaries. It is a hub that connects researchers and research through the embedding of ORCID identifiers in key workflows, such as research profile maintenance, manuscript submissions, grant applications, and patent applications.

www.orcid.org

The Solution: The ORCID Registry

Dr. Smith
Dr. J. Smith
Dr. James Smith

Dr. James Smith
46533489

ORCID Mission:

ORCID aims to solve the name ambiguity problem in research and scholarly communications by creating a central registry of unique identifiers for individual researchers

The screenshot shows the ORCID iD user interface for Jacob Smith. The page features a search bar at the top left and navigation tabs for 'FOR RESEARCHERS', 'FOR ORGANIZATIONS', 'ABOUT', 'HELP', and 'SIGN OUT'. Below the navigation, there are links for 'MY ORCID RECORD', 'ACCOUNT SETTINGS', and 'SIGN OUT'. The main content area displays the user's name 'Jacob Smith' and their ORCID iD '0000-0002-7299-680X'. There are buttons for 'View Public ORCID Record' and 'UPDATE'. A section for 'Other IDs' and 'Import Research Activities' is also visible. On the right side, there are statistics for 'Affiliations', 'Works', 'Grants', and 'Patents', each with a 'COMING SOON' or 'UPDATING' status. Below these are expandable sections for 'Personal Information', 'Affiliations', 'Works', 'Grants', and 'Patents'. The 'Grants' and 'Patents' sections show a message: 'You haven't added any grants' and 'You haven't added any patents' respectively. At the bottom, there are links for 'Contact us', 'Privacy Policy', and 'Terms of Use'.

The Scopus Author Identifier assigns a unique number to groups of documents written by the same author via an algorithm that matches authorship based on a certain criteria. If a document cannot be confidently matched with an author identifier, it is grouped separately. In this case, you may see more than 1 entry for the same author.

Journal Metrics

Scopus Journal Metrics offer the value of context with their citation measuring tools. The metrics below allow for direct comparison of journals, independent of their subject classification. To learn more, visit: www.journalmetrics.com.

SJR (SCImago Journal Rankings) ⓘ (2012) : 7.074

SNIP (Source Normalized Impact per Paper) ⓘ (2012) : 8.131

Compare with other Sources in Journal Analyzer

Documents available from

Articles in press ?

Latest issue:	Volume 383, Issue 9918 (2014)
2014	251 documents
2013	1791 documents
2012	1845 documents
2011	1700 documents
2010	1753 documents

Articles in Press are documents that have been accepted for publication, but have not yet been assigned to a journal issue. They are indicated by the Articles in Press symbol on document pages and in search result lists.

Analytics

Analyze Journals

Journal Analyzer: what is it?

- Journal Analyzer gives users a comparative overview of the journal landscape, showing how titles in a given field are performing relative to each other
- The objective data is presented in an easy, comprehensive graphical format comparing citations of max. 10 journals from over 21,000 peer reviewed journals from today all the way back to 1996.
- Data is updated bi-monthly to ensure currency.

What is the Impact Factor (IF)?

Impact Factor

[the average annual number of citations per article published]

- For example, the 2013 impact factor for a journal is calculated as follows:
 - A = the number of times articles published in 2011 and 2012 were cited in indexed journals during 2013
 - B = the number of "citable items" (usually articles, reviews, proceedings or notes; not editorials and letters-to-the-Editor) published in 2011 and 2012
 - 2013 impact factor = A/B
 - e.g. $\frac{\text{600 citations}}{150 + 150 \text{ articles}} = 2.000$

Calculations Last Updated: 08 Jun 2013

SJR (SCImago Journal Rank)

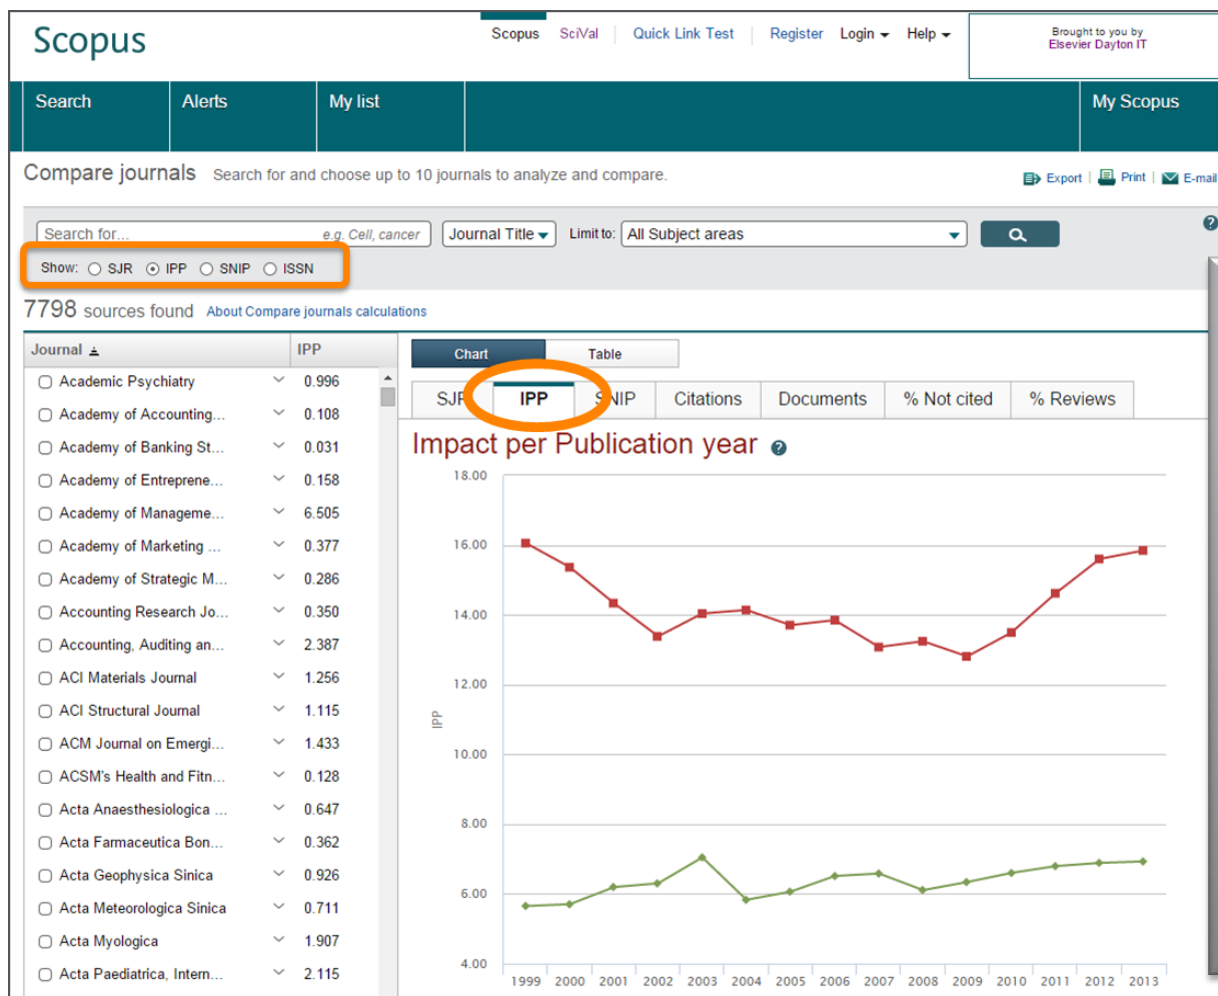

- Developed by Professor Félix de Moya, Research Professor at Consejo Superior de Investigaciones Científicas, SCImago Journal Rank ([SJR](#)) is a **prestige metric based on the idea that ‘all citations are not created equal’**. With SJR, the subject field, quality and reputation of the journal has a direct effect on the value of a citation.
- SJR
 - Is weighted by the prestige of the journal, thereby ‘leveling the playing field’ among journals
 - Eliminates manipulation: raise the SJR ranking by being published in more reputable journals
 - ‘Shares’ a journal’s prestige equally over the total number of citations in that journal
- **Relevant links**
 - [Research Paper: “The SJR indicator: A new indicator of journals’ scientific prestige”](#)
 - [SJR information website](#)
 - [SCImago website](#)

SNIP

(Source Normalized Impact per Paper)

- Created by Professor Henk Moed at CTWS, University of Leiden, Source Normalized Impact per Paper ([SNIP](#)) measures contextual citation impact by **weighting citations based on the total number of citations in a subject field.** The impact of a single citation is given higher value in subject areas where citations are less likely, and vice versa.
- SNIP
 - Measures contextual citation impact by 'normalizing' citation values
 - Takes a research field's citation frequency into account
 - Considers immediacy - how quickly a paper is likely to have an impact in a given field
 - Accounts for how well the field is covered by the underlying database
 - Calculates without use of a journal's subject classification to avoid delimitation
 - Counters any potential for editorial manipulation
- Normalizes for differences in citation behavior between subject fields
- Relevant links
 - [Research Paper: "Measuring contextual citation impact of scientific journals"](#)
 - [SNIP information website](#)
 - [CTWS Institute website](#)

IPP Impact per Paper

IPP is a component of SNIP, providing a ratio of citations per article published in a journal. IPP metric uses a three year citation window, which is widely considered to be the optimal time period to accurately measure citations in most subject fields.

List of titles

<http://www.elsevier.com/online-tools/scopus/content-overview>

What content is included in Scopus?

- **Journals:** Over 21,000 titles from more than 5,000 international publishers (see the [journal title list](#))
 - More than 20,000 peer-reviewed journals, including 2,800 gold open access journals
 - Over 365 trade publications
 - Articles-in-press (i.e., articles that have been accepted for publication) from more than 3,750 journals and publishers, including Cambridge University Press, the Institute of Electrical and Electronics Engineers (IEEE), Nature Publishing Group, Springer, Wiley-Blackwell and, of course, Elsevier

Calculate the IF in Scopus

In any given year, the impact factor of a journal is the average number of citations received per paper published in that journal during the two preceding years.^[1] For example, if a journal has an impact factor of 3 in 2012, then its papers published in 2010 and 2011 received 3 citations each on average in 2012.

The 2012 impact factor of a journal would be calculated as follows:

A = the number of times that articles published in that journal in 2010 and 2011, were cited by articles in indexed journals during 2012.

B = the total number of "citable items" published by that journal in 2010 and 2011.

("Citable items" are usually articles, reviews, proceedings, or notes; not editorials or letters to the editor.)

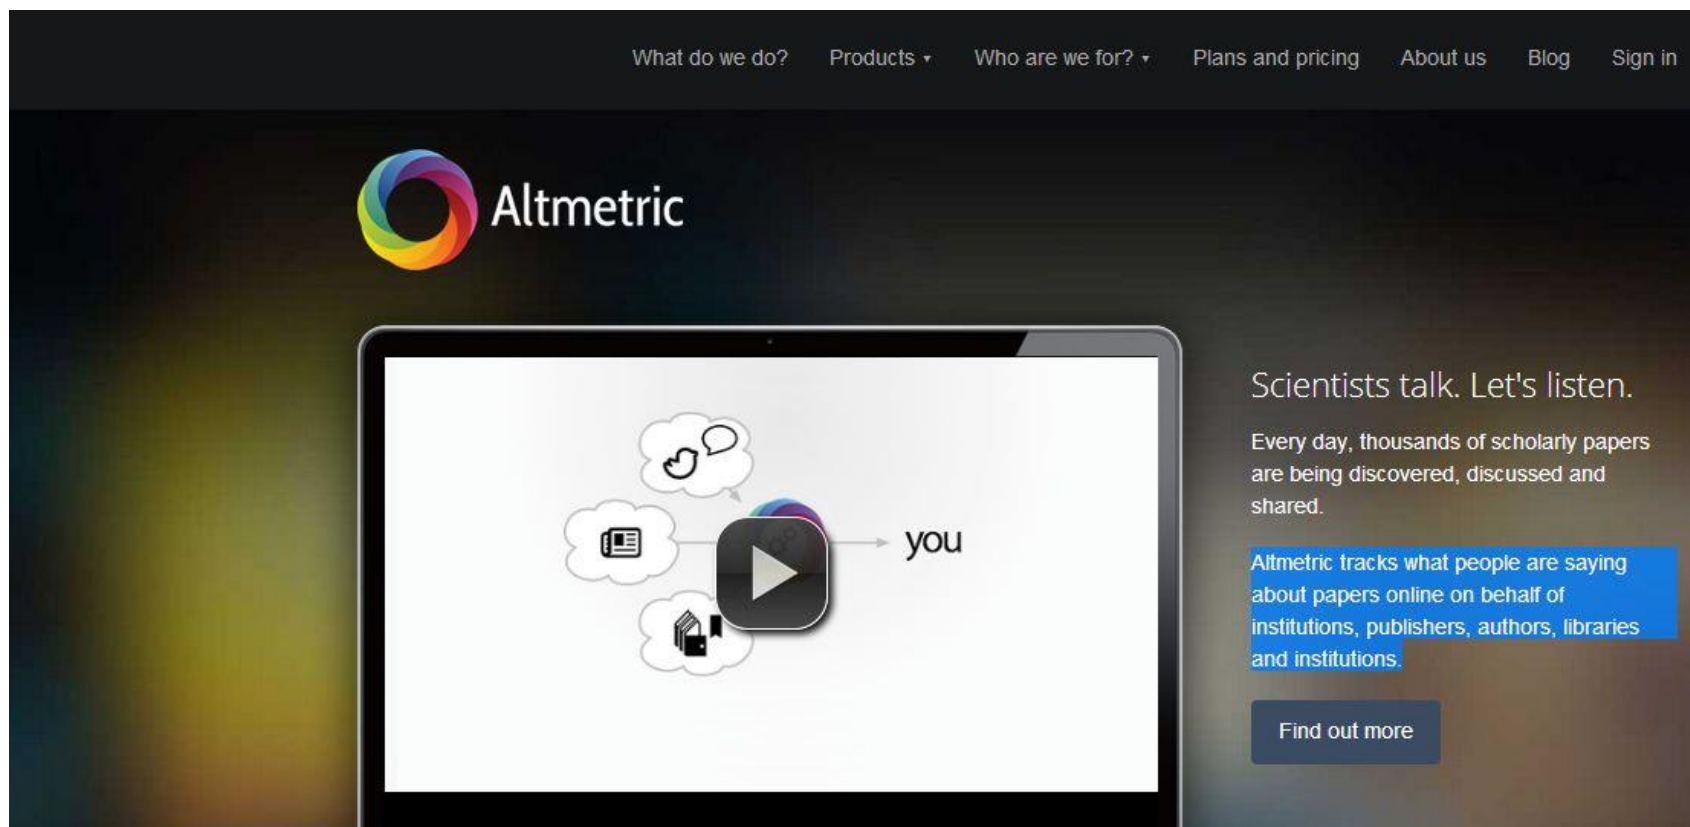

2012 impact factor = A/B .

Calculate the IF in Scopus

British Journal of Nutrition : IF 3.302

2. **Limit your search to 2010+2011= B** (number of documents published in 2010+11)
3. Select ALL titles and “**view citation overview**”
4. Look up **total number of citations** in 2012: **A**
5. **Devide A/B** and you receive the Impact factor

ALTMETRIC

The screenshot shows the Altmetric website homepage. At the top, a navigation bar contains the following links: "What do we do?", "Products", "Who are we for?", "Plans and pricing", "About us", "Blog", and "Sign in". Below the navigation bar is the Altmetric logo, which consists of a colorful circular icon and the word "Altmetric". The main content area features a large graphic of a tablet displaying a play button icon, surrounded by icons representing social media, documents, and a person, with an arrow pointing to the word "you". To the right of the tablet, the text reads: "Scientists talk. Let's listen. Every day, thousands of scholarly papers are being discovered, discussed and shared." Below this text is a blue box containing the text: "Altmetric tracks what people are saying about papers online on behalf of institutions, publishers, authors, libraries and institutions." At the bottom right of the main content area is a dark blue button labeled "Find out more".

ALTMETRIC

Altmetric offer four potential advantages:

- A more nuanced understanding of impact, showing us which scholarly products are read, discussed, saved and recommended as well as cited. (Mendeley etc)
- Often more timely data, showing evidence of impact in days instead of years.
- A window on the impact of web-native scholarly products like datasets, software, blog posts, videos and more.
- Indications of impacts on diverse audiences including scholars but also practitioners, clinicians, educators and the general public

How To Choose a Good Scientific Problem

 Alon, U.  

Department Molecular Cell Biology, Weizmann Institute of Science, Rehovot, 76100, Israel

Abstract

Choosing good problems is essential for being a good scientist. But what is a good problem, and how do you choose one? The subject is not usually discussed explicitly within our profession. Scientists are expected to be smart enough to figure it out on their own and through the observation of their teachers. This lack of explicit discussion leaves a vacuum that can lead to approaches such as choosing problems that can give results that merit publication in valued journals, resulting in a job and tenure. © 2009 Elsevier Inc.
